
Development The expansion was announced alongside the release of the game on May 15, 2009, with the expansion being available for purchase on July 14. The expansion is included in the game and not as a separate download. Reception Dinosaur Digs was released to moderately positive reviews. It received an aggregate score of 80% on Metacritic, a "Mixed or average" score of 70.05% on GameRankings, and a user score of 69% on GameRankings, based on 13 and 38 reviews, respectively. The game was released to the public two days before the 2009 United States mid-term elections, in which the Democrats lost their majority in both houses of the United States Congress, and the Republicans gained a majority in the House of Representatives, and thus gained the power to override the Obama Administration's legislative initiatives. The game was also released around the same time as another expansion pack, Zoo Tycoon 3: Land of the Giants, which was critically and commercially unsuccessful.

It made me realize that React can only be as fast as the lowest common denominator of your components and you can't easily do anything in server-side rendering. For smooth page transitions I found I need to work in the client, and thought I would try and abstract that from the React ecosystem, so I decided to use plain JavaScript and a DSL/declarative style. I'm on day three of a 40-day HN/producthunt freebie, so feedback is always welcome. Q: Can't connect to database I have a problem with connecting to a local database. It says "cannot create object" and when i connect to the internet it says "database connection failed" I have tried 82157476af
