movement that somehow feels both floaty and extremely slippery at the same time, the player moving at insane speeds which are hard to deal with or move precisely with and graphics that are almost outright unappealing; as well as even more, do not make a good game. The general lack of polish (ex: title screen resetting in each menu, grating sound effects such as for the text when the game opens) also doesn't help, I've made my own games and bugs like that aren't too hard to fix. If you want a precision platformer that is in any way tightly/well made, or anything with the controls to warrant the precision needed for this game, look elsewhere.. movement that somehow feels both floaty and extremely slippery at the same time, the player moving at insane speeds which are hard to deal with or move precisely with and graphics that are almost outright unappealing; as well as even more, do not make a good game.
